lab IO model, SRAM 100 KiB
HBM traffic per head (MB, bf16)
sequence length T
slope 2 (T^2)
naive d=64
flash d=64
flash causal d=64
naive d=128
flash d=128
flash causal d=128
Br = min(ceil(M/4d), d) caps the gain
traffic ratio
block size
SRAM per SM (KiB)
naive / flash, T=8192, d=64
Br (rows of Q block)
Bc (rows of K/V block)
